GENERAL BUREAU OF STATISTICS

**INTERNATIONAL YEAR OF STATISTICS PRAISES CONTRIBUTIONS OF
WOMEN STATISTICIANS ON INTERNATIONAL WOMEN'S DAY**

*Statistics 2013 participants laud women statisticians
for advancing statistical sciences*

Paramaribo, Suriname, MARCH 8, 2013—The General Bureau of Statistics (GBS) and the more than 1,775 organizations in 121 countries participating in the International Year of Statistics (Statistics2013) today join women around the world in the celebration of International Women's Day.

Observed each year on March 8, International Women's Day is a global day celebrating the economic, political and social achievements of women past, present and future. The event has been observed since the early 1900s, which was a time of great expansion and turbulence in the industrialized world that saw booming population growth and the rise of radical ideologies.

Statistics 2013 is a worldwide initiative that is highlighting the contributions of the statistical sciences to finding solutions to global challenges. General Bureau of Statistics (GBS) is a Statistics2013 participating organization.

Like their counterparts in other professional fields, women pioneers in the statistical sciences have made outstanding and trailblazing contributions to their profession and have opened the field to more women.

"We salute the world's women this International Women's Day—a special day dedicated to them and their achievements past, present and future," says Mr. IWAN A. SNO Director of the General Bureau of Statistics (GBS).

"The statistical sciences profession and our global society has greatly benefited from the groundbreaking contributions of women statisticians including Florence Nightingale, who used statistics to modernize health care; Dr. Janet Lane-Claypon, who made several important contributions to epidemiology by using and improving its use of statistics; and Janet Norwood, who as the first woman commissioner of the U.S. Bureau of Labor Statistics made major contributions to government statistics."

Women statisticians are influential in many countries—41 of the world's 190 statistical offices were headed by women in 2010, says *The World's Women 2010: Trends and Statistics*, a report commissioned by the United Nations. As regards CARICOM, 9 of the 20 statistical offices of the CARICOM Members and Associate Members are headed by a woman and the Project Director Statistics of the CARICOM is a woman!

In honor of women worldwide, today and through the weekend on its website (www.statistics2013.org) Statistics 2013 features the International Women's Day logo as well as several special articles and items that highlight the important contributions of women statisticians, including:

- **Blog posts** written by members of the American Statistical Association's Committee for Women in Statistics and the Caucus for Women in Statistics
- A self-authored "**Statistician Job of the Week**" article by the Smithsonian Institution's chief mathematical statistician, Dr. Lee-Ann Hayek
- A "**Statistic of the Day**" focused on the influence of women worldwide
- An insightful "**Quote of the Day**" from female trailblazing statistician Florence Nightingale
- A "**Statisticians in the News**" article that profiles a prominent female statistician from Oregon State University
- Links to **profiles of several influential female statisticians** from the past and present

The goals of Statistics 2013 are to increase public understanding of the power and impact of statistics on all aspects of society and to nurture statistics as a profession among high-school and college students. Participants include national and international professional societies, universities, schools, businesses, government agencies and research institutes. These groups are educating millions of people about the contributions of the statistical sciences through seminars, workshops and outreach to the media.

The founding organizations of Statistics 2013 are the American Statistical Association, Institute of Mathematical Statistics, International Biometric Society, International Statistical Institute (and the Bernoulli Society), and Royal Statistical Society.

Motto Algemeen Bureau voor de Statistiek / General Bureau of Statistics:

"Statistical Thinking will one day be as necessary for efficient citizenship as the ability to read and write" (H. G. Wells).
